

Enhancing Education Through Technology – Grant Proposal

The primary purpose of the Enhancing Education Through Technology (EETT - Title II, Part D) grant is to expand teacher and instructional program administrator involvement in the Florida Digital Educator Program. Clay County's proposal submission, "Clay Digital Reading Educators," will provide professional development training in innovative classroom instructional activities that promote and support effective digital resource integration in the classroom. The grant will provide funding for digital tools that will allow seamless integration of technology into the curriculum.

Providing educators with the technology skills and equipment will give students the opportunities to participate in project-based learning that requires the use of higher order thinking skills.

Possible funding: \$ 843,303
