

SCHOOL DISTRICT OF CLAY COUNTY
VANDALISM AND BREAK-INS

**FINAL REPORT,
ANALYSIS,
CONSIDERATIONS
AND
RECOMMENDATIONS**

**DEVELOPED BY: TASK FORCE ON SCHOOL SECURITY
FEBRUARY, 2006**

PURPOSE

At the request of the Superintendent of Schools, staff was asked to analyze the status of District schools in light of recent vandalism and break-in incidents. Recommendations were requested to be developed to guide in the setting of priorities.

ACKNOWLEDGMENTS

A Task Force was developed to undertake the purpose and to formalize priority recommendations. The task force make-up is listed below and their efforts are deeply appreciated.

1. Michael J. Elliott, Assistant Superintendent of Support Services
2. Dr. Steve Miller, Director of Information Services
3. David Mueller, Computer Operations Manager
4. Carolyn Grissom, Instructional Technology Specialist
5. Jim Connell, Director of Facility Planning and Construction
6. Tom Smith, Director of Maintenance and Operations
7. Bruce Harvin, Coordinator of Operations
8. Phil Hans, Coordinator of Property Control
9. David Broskie, Principal, Middleburg High School
10. Lt. Ronnie Gann, Clay County Sheriff's Office
11. Frances Spillers, Clay County Sheriff's Office Analyst

VANDALISM AND BREAK-INS IN CLAY COUNTY SCHOOLS

The term *school vandalism* refers to willful or malicious damage to school or district grounds and buildings or furnishings and equipment. Specific examples include glass breakage, graffiti and general property destruction. The term *school break-in* refers to an unauthorized entry into a school or district building when the school is closed (e.g. after hours, on weekends, on school holidays).

Schools are unique environments; the factors underlying school vandalism and break-ins differ from those underlying similar acts elsewhere. School break-ins typically fall into one of three categories:

- *Nuisance break-ins*, in which youth break into a school building, seemingly as an end in itself. They cause little serious damage and usually take nothing of value.
- *Professional break-ins*, in which offenders use a high level of skill to enter the school, break into storage rooms containing expensive equipment, and remove bulky items from the scene. They commit little incidental damage and may receive a lot of money for the stolen goods.
- *Malicious break-ins* entail significant damage to the school's interior. Offenders sometimes destroy rather than steal items of value.

While school vandalism and break-ins generally comprise many often-trivial incidents, in the aggregate, they pose a serious problem for schools and communities and the police and fire departments charged with protecting them.

Reports are required for all vandalism and break-in occurrences in Clay County. Since 2001, there have been 286 occurrences. 63% of all school break-ins involved forced entry. 37% therefore, required no forced entry (mainly due to doors or windows left unlocked or open). 95% of all vandalism suspects were/are between the ages of 7 and 19 years old.

Vandalism costs are usually the result of numerous small incidents. Recent estimates reveal that the cost of school vandalism are both high and increasing. District records indicate that costs to the district were \$44,547.00 in F.Y. 2003-04, \$68,580.00 in F.Y. 2004-05 and \$63,567.00, to date, in F.Y. 2005-06.

Not all incidents of vandalism and break-ins have the same effect on the school environment. The monetary cost (where the repair charges are high), and the social cost (where the event has a significant negative impact on student, staff and community morale).

Those who vandalize or break into schools are typically young and male, acting in small groups. Vandalism and break-ins are most common among Junior High School students, and become less frequent as students reach High School.

While the majority of students do not engage in vandalism, they do not generally harbor negative feelings toward those who do. Participating in vandalism often helps a youth to maintain or enhance his or her status among peers. Other motivators that contribute to vandalism include:

- *Acquisition vandalism* is committed to obtain property or money.

- *Tactical vandalism* is used to accomplish goals such as getting school cancelled.
- *Ideological vandalism* is oriented toward a social or political cause or message, such as a protest against school rules.
- *Vindictive vandalism* is done to get revenge.
- *Play vandalism* occurs when youth intentionally damage property during the course of play.
- *Malicious vandalism* is used to express rage or frustration.

Most vandalism occurs, quite naturally, when schools are unoccupied. Before and after school hours, on weekends, and during holidays. Local factors, such as the communities' use of school facilities after hours, will also determine when vandalism is most likely to occur in any one school.

Research has studied why some schools are more crime-prone than others. A school's attractiveness as a vandalism target may also be related to its failure to meet some student's social, educational and emotional needs. Students may act out to express their displeasure or frustration. Schools with either an oppressive or a hand-off administrative style, or those characterized as impersonal, unresponsive and non-participatory, suffer from higher levels of vandalism and break-ins. Conversely, research supports that in schools with lower vandalism rates;

- parents support disciplinary policies;
- students value teacher's opinions;
- teachers do not express hostile or authoritarian attitudes toward students;
- teachers do not use grades as a disciplinary tool;
- teachers have informed, cooperative, and fair dealings with the Principal; and
- staff consistently and fairly enforce school rules.

Certain physical attributes of school buildings and grounds are also researched as to their vulnerability to vandalism and break-ins. In general, large, modern, sprawling schools have higher rates of vandalism and break-ins than smaller, compact schools. The modern, sprawling schools have large buildings scattered across campus, rather than clustered together. A school's architectural characteristics may also influence the quality of administrative and teacher-student relationships that are developed, which can affect the school's vulnerability.

CURRENT PREVENTION PRACTICES IN CLAY COUNTY SCHOOLS

The approach to vandalism and break-in prevention to district and school facilities is focused as follows:

1. Contracted security during Christmas and Graduation time.
2. Security perimeter/passive infrared detection at district facilities and 13 schools.
3. CCTV system installation - this is being achieved at the rate of one school per year. We are into our third year of this program.
4. On-campus housing for after-hour security. This program is being discontinued through attrition.
5. Extra security coordination with law enforcement. This includes increasing the frequency of patrols and even surveillance.
6. Installing warning signs.
7. Storing valuables in secure areas.
8. Proper outdoor lighting.
9. Reducing vandalism through construction material selection.
10. Expedient damage repair.
11. Room and building key security.
12. Maintaining an inventory of valuable equipment.

SPECIFIC CONSIDERATIONS TO SCHOOL VANDALISM AND BREAK-INS

1. Controlling Access To Deter Unauthorized Entry

Gates, deadbolt locks on doors and windows, door and window shutters, and doors that open only from the inside are effective means of securing school buildings. Access can also be deterred by limiting the number of entry points in school buildings. Moveable gates can be used indoors to secure sections of the building, while also permitting community use of facilities after hours. Such measures can also delay intruders' efforts to get away. The potential effectiveness of this response decreases with inconsistent or improper use of the hardware.

Intruder alarms, motion sensors, heat sensors and glass-break sensors are useful for quickly detecting unauthorized entry. Because putting alarms and sensors throughout the school is likely to be cost-prohibitive, focusing on passageways to different parts of the building, and on areas where valuable equipment and records are stored, is most effective. Alarm signals should be sent to law enforcement, off-campus security posts and the school principal. However, alarm systems are prone to high rates of false alarms, which not only cost the school if a fine is imposed, but also waste police resources. Faulty or inappropriately selected equipment, poor installation and user error are the main causes of false alarms.

2. Posting Warning Signs

Access-control signs are an important part of "*rule setting*" in that they establish the types of activities prohibited both during and after school, and notify potential intruders that they are under surveillance.

3. Storing Valuables In Secure Areas

Storing high-value audio-visual equipment and computers in rooms equipped with high-quality locks, in the inner section of the building, makes them harder to access. Further, using carts to move expensive equipment to a central storage room can reduce the number of rooms that need to be secured. Bolting computers to lab and office desks makes their removal more difficult and time-consuming. Removing signs indicating the location of expensive equipment is also advisable.

4. Reducing The Availability Of Combustibles

Most arson fires are started with materials found on-site. For this reason, indoor and outdoor trash cans should be emptied regularly, and any flammable chemicals in science labs and maintenance storage areas should be properly secured.

5. Adjusting Indoor Or Outdoor Lighting

There is no consensus on whether well-lit school campuses and building interiors or “*dark*” campuses are superior in terms of crime prevention. Obviously, lighting adjustments alone are not effective deterrents, but in combination with other prevention measures, both approaches have shown positive results. Well-lit campuses and buildings will offer some protection to custodial staff and others who may legitimately be on campus after dark. On the other hand, a “*lights out*” policy makes it more difficult for potential intruders to manipulate locks and hinges at entry points, and if intruders do enter the building, observers can easily spot any lights that should not be on. Not only have some schools benefited from decreased vandalism-related costs, but they have also realized significant energy savings.

6. Obstructing Vandals Through Physical Barriers

Target-hardening measures such as using stronger finishes and materials, or placing objects out of reach or in an enclosure, makes it harder to damage property. These can also include toughened glass or glass substitutes, graffiti-repellent paint or coatings, concrete or steel outdoor furniture, tamper-proof hardware out of reach from the ground; and door hinges with non-removable pins. Computer labs and classes that use expensive equipment should be located within permanent facilities and on the second floor to impede access and removal.

7. Repairing Damage Quickly And Improving The Appearance Of School Grounds

Clean, well-maintained buildings free of debris and garbage and with attractively landscaped grounds are less at risk for vandalism and break-ins. Consistent maintenance may serve as an “*occupation proxy*”, giving the appearance that the school is under steady surveillance by those concerned about keeping it safe. Thus, it follows that any damage incurred, either through vandalism or normal wear and tear, should be repaired quickly.

8. Increasing The Frequency Of Security-Staff Patrols

Increasing the frequency with which security patrols school grounds and buildings increases the likelihood that a potential intruder will be seen. It can be useful for police to make sporadic checks of school grounds while on their normal patrol.

9. Using Closed-Circuit Television

The strategic placement of closed-circuit television (CCTV) may deter potential offenders. When vandalism and break-ins occur, CCTV footage can be used to identify the perpetrators. Though the initial financial outlay may be significant, over the long term, CCTV may be less expensive than funding a full-time security patrol.

CCTV can serve as a deterrent against acts of vandalism, graffiti, fights or gang-related activities, drug use, and thefts.

10. Providing Caretaker Or School Security Housing On School Grounds

The continuous presence of a caretaker on school grounds can deter potential intruders. A mobile home on the school grounds can provide rent-free housing to a responsible adult in exchange for a designated number of hours patrolling the property.

11. Holding Offenders Accountable

Very few perpetrators of school vandalism are prosecuted. Courts are generally lenient with offenders, and in most cases, the damage from an individual incident is minor and does not warrant harsh penalties. However, creative and well-publicized interventions to hold offenders accountable can have both a specific and a general deterrence effect.

Restitution programs include a set of administrative and legal procedures to get money from offenders to pay for repair or replacement of damaged property. Publicizing the results of these efforts is important to maintain their deterrent effect.

12. Educating School Staff

Not only should school staff be familiar with fire safety procedures, but they should also be aware of the various strategies enacted to protect school property. The strategies should be included in pre-school year and pre-summer in-service training. Creating procedures for handling emergencies and telephone numbers of those to be contacted when suspicious activity is observed, ensures that teachers will have ready access to those details.

13. Controlling Building And Room Keys

Intruders sometimes enter school buildings by using stolen or duplicate keys. The distribution of keys to building entrances and equipment storage rooms should be limited, and periodic key checks should be performed to ensure that the owners of keys have control of them.

14. Maintaining An Inventory Of Equipment

Missing equipment sometimes goes unreported because school officials do not know when it has been stolen. Diligent inventory checks cannot only help in maintaining control of school assets, but can also help in preparing loss estimates if property is damaged or stolen.

Establishing a complete detailed cost of each incident is not only important for restitution through the courts, but also for valuable understanding of vandalism and break-in cost for district analysis.

15. Changing the Organizational Climate

Social measures are not generally effective forms of crime prevention. However, because schools have closely structured social systems and clear authority systems, responses that affect the school environment can be effective. In particular, schools can seek to make the environment more positively reinforcing, reduce the misuse of disciplinary procedures, and work to improve administrative-teacher, teacher-student and custodian-student relations.

16. Providing Rewards For Information Concerning Vandalism Or Break-Ins

Offender-focused responses require that vandals and intruders be identified and apprehended. Police investigations of vandalism incidents can be enhanced by high-quality information provided by students and community residents. As seen with traditional “*crime stopper*” programs, setting up telephone or internet-based tip-lines, offering rewards for information and guaranteeing anonymity encourage students and residents to come forward with specific information.

17. Creating “*School Watch*” Programs

Similar to “*neighborhood watch*” efforts, community residents can conduct citizen patrols of school property during evenings and weekends. However, community watch programs are difficult to sustain. Generally, community watch programs have produced short-term reductions in vandalism but not over the long term.

18. Evaluating Use Of School Facilities After Hours

There is no consensus on how effective after-hours use of school

facilities is in deterring vandalism and break-ins. On the one hand, making facilities and amenities available to residents increases the opportunity for natural surveillance to protect school buildings and property. Such access is also in keeping with the spirit of schools as hubs of community activity. However, residents who use the facilities after hours may not always have innocent intentions. Rules and boundaries should be made very clear to participants and only those areas required for the activities should be accessible with other areas of the school secured by movable gates and/or locking partitions.

Significant use of school facilities is by teachers going to their classrooms after hours, on weekends, holidays and during the summer. Hidden surveillance by the police is often disrupted by teachers coming and going. Evaluating the opportunity for teacher access by limiting access to specific times is a consideration. Limiting access would also have an indirect benefit on energy savings and building security as doors and windows may not be left unlocked inadvertently by teachers.

19. Increasing Penalties

If the courts did not address the offense appropriately in the judgement of the District, administrative punishments (for example expulsion) or civil court remedy could be sought.

TASK FORCE RECOMMENDATIONS

Based on the consensus of the Task Force, the following recommendations are provided as the highest priority for consideration

1. Initiate an inventory of all keys and key logs within the school system. A strict key control protocol should be established and a validation and reconciliation of our status should be implemented. Key security should be annually monitored and evaluated.
2. Security enhancement by providing professional development to all staff should be implemented. This training should focus on awareness, prevention and impact of vandalism and break-ins. Achieving everyone's identity with security is the objective. This training should be required, be formal, with sign-off and should establish accountability standards and expectations.
3. Provide security personnel on a full-time basis, either as District employees or on a contracted basis, to serve as night security for educational facilities. A staff of five (5) to eight (8) security personnel should be initially established and increased as the needs of the District deems necessary.

The installation of security cameras was also identified as a high priority by the Task Force. However, after discussion, this consideration was considered with less priority than the above. If a camera system was implemented, security staff to monitor the system would be required. It was felt that since security staff was required, they could better serve the District by being at and protecting the school instead of being in a remote room observing monitors.

4. Initiate a survey of all educational facilities to review and implement a “*hardening of facilities*” program to, through modification of doors, windows, locks and other physical aspects, discourage entry to facilities.
5. Initiate a pilot program to establish a “*lights-out*” after-hours school. This program will make it more difficult if intruders enter a building and observers can easily spot any lights that should not be on. The selection of the pilot school should be chosen and coordinated with input from law enforcement. A review should take place annually to determine the expansion of the program.

While high priority consensus was not achieved on the following considerations, these are provided for information and without any rank order.

- ▶ A substantial increase for monetary investment for the installation of school camera systems from \$40,000.00 per year to at least \$120,000.00 per year and employ a minimum of three (3) District security personnel to monitor the school camera system.
- ▶ Initiate the development of a systematic data collection and communication system providing this information to the Superintendent, School Board and certain other staff. Provide public information on the event, its costs, court actions and restitution to the School District.
- ▶ Pursue civil action against the parents of minors or against the offenders, if adults, on any incident where the court did not appropriately recover the loss to the School District.
- ▶ Provide perimeter alarm systems in all schools and relocatable areas. Also looking into the capability of establishing a passive

listening system with alarm linked to each classroom by detecting unscheduled entries. One of the Committee's concerns with security alarm systems was the significant use of facilities after hours by teachers and the public. Concern was identified on the impact of false alarms and/or alarms activated from entry by teachers or the public.

- ▶ Require monthly or periodic audit of high cost equipment. Establishing strict sign-out procedures and validation of return.
- ▶ Establishing a security validation of school/District facilities at the end of each day.
- ▶ Completely fence all school property either preventing any access to school property or by fencing around the physical education area/play grounds so that they can remain available to the public. Purpose with this is to completely fence and isolate the school buildings.
- ▶ Limit employee/public access to schools after hours establishing a time of no access during the school week of 10:00 p.m. - 5:00 a.m. with no access on weekends or holidays.
- ▶ Utilize landscaping for security enhancement and also make sure landscaping does not prevent vision corridors or observation of facility for the detection of intruders.
- ▶ Establishing security protocols and procedures on computer and high cost equipment including computer lock down devices, radio frequency identification devices, storing computers and other valuable equipment in separate high security storage areas.
- ▶ Establishing community watch programs around schools and solicit support to observe and report intruders on school campuses.

This program to be achieved in concert with a communications program on the impact of vandalism and break-ins.

- ▶ Enhance outside lighting by utilizing solar powered fixtures.
- ▶ Reinitiate the on-site school security housing program to provide a continuous presence of a caretaker on school grounds. A mobile home to provide rent-free housing to a responsible adult in exchange for a designated number of hours patrolling the property.
