## Welcome to CIMS

The Continuous Improvement Management System (CIMS), formerly known as *SIP Online*, was developed by the Bureau of School Improvement (BSI) to provide districts and schools with a platform for school improvement planning and problem solving. The system has continued to expand and now includes:

- Data visualizations for needs assessment and goal development
- School and district improvement plans
- School Improvement Grant (SIG) proposals
- Registration for BSI-hosted professional development opportunities
- Resources, tools and guidance to support continuous improvement

Future enhancements are under construction, such as additional state-required plans, federal program applications, and project management and monitoring tools.

All districts and schools in Florida are welcome to use CIMS! Specific requirements and timelines for schools and districts in Differentiated Accountability, as well as a wealth of additional information may be found in the [FAQ](#) and [Toolkit](#).

## Public Access

[Click here](#) to access current and prior year plans that are published for specific districts and schools. To learn how to use the public features and functions of CIMS, visit the tutorial by clicking the icon below.
